

DREW™ AIR DIAPHRAGM PUMP SYSTEM

DESCRIPTION

The DREW Air Diaphragm Pump System is a pneumatic driven diaphragm pump and tank set. It is suitable for circulating and transferring various marine products.

The unit is suitable for introducing cleaning products from the smallest heat exchanger to the largest diesel jacket system, propulsion boiler, or tank. The system may also be used for circulating cleaning solutions through evaporators and small heat exchangers or for stripping tanks and bilges. The 3-way suction valve design allows for system circulation without the risk of tank overflow or it can be externally piped to provide system return to the tank.

The unit is rugged and requires little maintenance.

APPLICATIONS

- SAF-ACID™ descaling compound
- AMERIOD DC disc cleaner
- DESCALE-IT™ liquid acid descaler
- FERROCLEAN® cleaning treatment
- SNC™ 2000 carbon remover

DREW Air Diaphragm Pump System (PCN 1AA8981)
