

# DREWPLUS® L-474 FOAM CONTROL AGENT

## DESCRIPTION

DREWPLUS L-474 foam control agent is effective in controlling foam in shipboard sewage treatment systems. It is a formulated blend of alcohols, silica derivatives and surface-active compounds that provides effective foam suppression. DREWPLUS L-474 foam control agent is not oil-based.

## APPLICATION & USE

DREWPLUS L-474 foam control agent can be fed neat into the sewage collection tank using a metering pump. It can also be fed as a dilution using the stainless steel DREW™ Beta Metering Systems (PCN 1AA8978/1AA8979) and a continuous operating mixing paddle. A Defoamer Control System Model DEF-14 (PCN 7778105) can also be used to sense the level of foam and turn on the metering pump when the foam level rises.

Dosage of DREWPLUS L-474 foam control agent is dependent on the foaming tendency of the system to be treated but generally a dosage of 1 to 10 ppm is effective. Although DREWPLUS L-474 foam control agent will collapse foam, it may be more effective when fed before foam develops. As a general rule, the best point of application is right at the surface of the water shortly before the foam appears.

DREWPLUS L-474 foam control agent in undiluted form is not compatible with poly vinyl chloride (PVC). At use dosage, it is compatible with PVC.

## TYPICAL PHYSICAL PROPERTIES

Appearance:	Opaque, off-white liquid
Flash Point:	136 °C (>200 °F)
Specific Gravity @ 25 °C (77 °F):	.94

## PACKAGING

DREWPLUS L-474 foam control agent is normally available in 25-liter containers (PCN 5307401) in the United States.

Features	Benefits
Liquid formulation	Easy to feed
Low dosage	Economical
Effective over a broad pH range	Compatible with sewage system water
Alcohol-based	Better performance than oil-based
